Introduction

Annotating PDFs ensures that your corrections are absolutely clear and that errors cannot be introduced through misinterpretation of your markup. This guide is intended to show you the essential tools you need to start using eAnnotation but if you need further information please refer to the Adobe Help files.

To start using eAnnotation make sure you have downloaded the most recent version of Acrobat Reader from *www.adobe.com*. This will give you access to the widest range of annotation tools and ensure that you are able to work with the files that we send to you. This document is written with Adobe Reader X screen shots.

Please note:

- The proof will have been edited to house style. We retain the right to veto amendments if they are non-essential or too costly.
- *Do not* edit the PDF files even if you have the means to do so. All changes must be visible.

Viewing your documents

Viewing two page spreads

You may wish to view your document in a two page format to see the layout as it would be in print. In the **View** menu, select **Page Display**, then either **Two Page View** to see only two full pages at a time, or **Two Page Scrolling**, to allow scrolling through the document, in a two-page format.

Note: If, when viewing the proof in a two page format, what should be a left hand page (verso) appears on a right hand page (recto) and vice versa, you can correct this by clicking on **Show Cover Page in Two Page View** in the same menu (see above). You should aim to have even-numbered pages on the left hand page and odd-numbered pages on the right.

Comparing documents

You may wish to have two documents open together for comparison, for example, if you are collating your contributors' comments onto one set of PDFs.

In the **Window** menu select **Tile** and then **Horizontally or Vertically**.

Vertical Tiling:

Accessing the Comments Tools

The selection of tools you can use to annotate the proof is not visible by default when you open Adobe Reader. Click on the **Comment** box in the top right corner of the page.

This opens up a panel down the right hand side of the page, made up of three sections. More information on each of these three sections will follow.

In addition you may need to change a preference setting in order to use the editing tools. In the **Edit** menu, click on **Preferences**, select the **Documents** tab in the left menu and change **PDF/A View mode** to **Never.** (Note that for the Mac version of Adobe Reader X, '**Preferences**' can be found in the main Adobe Reader menu.)

If you have done both of these actions and you still cannot annotate your proofs then please let your contact person know and they will resupply the PDFs.

Annotations Tools

When marking corrections to your proofs, the majority of tools you will use will be found in the Annotations section. From here you can highlight text, mark for text to be inserted, mark for existing text to be replaced with new text, mark text for deletion, underline text, and attach a comment balloon to a specific word or phrase.

Highlight selected text

Use the cursor to select the text to be highlighted, then click on the **Highlight text** icon in the Annotations section. The characters you had selected are highlighted in yellow. This tool can be useful when you are selecting terms for when you are compiling your index.

If you also need to use text edit tools on a highlighted word (e.g. to correct a spelling mistake) you can do so. Simply go to the correct position using the arrow keys on your keyboard (you won't be able to select using the mouse once the text has been highlighted).

If you need to select text hold down the Shift key and use the arrow keys to select it.

Insert text at cursor

This allows you to insert a letter, word, or phrase to the current text. Place the cursor at the insertion point, then click on the **Insert text at cursor (Ins)** icon in the Annotations section. A caret mark appears in the text and a blue comments box opens for you to type the insertion.

coj_2383_RevCrx_EV_15-Jul-10.pdf - Adobe Reader			×

standard deviation of output $\sigma(\mathcal{Y})$ moves from endogenous defaults accelerate loans to firm's fluct tuations by 3%. Looking at the relative importance firm default is responsible for 75% of the amplifications between the two repayment rates			

You can type italic and bold text in the insertion box by pressing CTRL-I and CTRL-B (Note: for Macs this is the 'cmd' key), and you close the box by clicking on the minimize symbol in the top right corner. The caret mark remains visible to indicate that a change is to be made, and clicking on it reopens the comment box.

Replace selected text

This allows you to replace one letter, word, or block of text. Use the cursor to select the text to be replaced, then click on the **Replace (Ins)** icon in the Annotations section.

Acrobat will score a line through the text to be replaced and insert a caret mark at the end. A comment box opens into which you can type the text for insertion.

Looking at the relative impo- firm default is responsible for 75% of the amplification whereas the bank default is representible for 75% of the amplification whereas the bank default is	 Annota ♥ ♥	ations	₽ - T ₀

Here, the instruction is to replace 'Figure 2' in the proofs with 'Table 3' (typed in the blue comment box). You can type italic text by pressing CTRL-I (the "Ctrl" and "I" keys on the keyboard simultaneously) and bold text by pressing CTRL-B. To switch off italic/bold, press CTRL-I/CTRL-B again. Close the comment box by clicking on the minimize symbol in the top right corner. The blue line and the caret mark remain visible to indicate that a change is to be made, and clicking on either reopens the comment box.

Cross out text for deletion

This allows you to delete a letter, word, or phrase in the current text. Use the cursor/mouse to select the text to be deleted, then click on the **Strikethrough (Del)** icon in the Annotations section. A red line is scored through the text.

Underline selected text

Please don't use this tool for annotating PDFs. Although underlining is the conventional indication for text to be set in italic type, we prefer that you use the **Add note to text** tool to highlight this instead.

Add note to text

Use the cursor to select the text to be highlighted, then click on the **Add note to text** tool icon in the Annotations section. This works in the same way as the **Sticky note** tool except that instead of placing a balloon at the cursor, it highlights the selected text in yellow.

It can be a useful way of asking us to check that a font is correct or telling us to change a word or phrase to bold or italic.

Add sticky note

This tool allows you to attach an electronic Post-It note to the document. It should not be used for editing. However, the note can be used for general comments rather than specific line corrections. You might, for example, want to ask a co-author to review a passage for sense or ask us to make a global change (e.g. from 'decision making' to 'decision-making').

Click on the **Add sticky note** icon in the Annotations section, then click on the text or margins where you wish your comment to appear. A small balloon icon will be placed at the cursor, linked to a box into which you can type your comments:

Type your comment and then click on the minimize symbol in the top right corner. The balloon icon will remain visible, and you can open (and edit) the note by double clicking on this icon.

If you are responsible for collating comments from contributors, co-editors or co-authors then you will find the 'Options' button, in the top left corner of the box, useful for replying to comments or for deleting, accepting, or rejecting comments. You can also change the shape of the balloon to represent different types of comment. Please note: any comment intended for someone other than the publisher or our freelance suppliers (i.e. Project Managers, Proofreaders etc.) must be removed before the file is returned to us.

Inserting special characters

In general, if a special character has a keyboard shortcut in Word, this will also work in a note box (e.g. type ALT-0150 for an n-dash or ALT-0151 for an m-dash. If you don't know the shortcut or there isn't one, type the special character in Word and copy and paste it into the note box. (Note: for Macs, use the 'cmd' key instead of 'ALT'. Shortcuts may be different to those on a PC).

Alternatively, for more complex special characters, it may be better to attach a file with the character showing correctly (see below for instructions on how to do this).

Attaching documents

It's possible to attach accompanying files to your annotated PDF. These files may be replacement figures, large sections of text to be inserted, or text including more complex special characters.

Click on the **Attach file** icon in the Annotations section, then click in the text or the margin close to the point to which the file relates.

A pop up box will appear, from where you can select the file to be attached . Click open once you have the file selected, then confirm the properties for the attached file (in particular how you want the attachment marker to appear in the proof).

Click OK and the icon for the attachment appears in the proof.

Drawing markups tools

The next section in the Comment panel is the **Drawing Markups** section. The drawing tools in this section can be useful for highlighting sections of the text, tables, or figures that are to be moved and highlighting where they are to be moved to. You can draw lines, ellipses, rectangles, cloud shapes, or free-form shapes from this section.

Tools	Comment Share
Annota	tions
▼ Drawin	g Markups
i B	□
00	
▼ Comme	ents List (21)

Comments List

Expanding the **Comments List** gives you a view of all amendments and comments marked up in the proof. Clicking on each item in the Comments List highlights the corresponding markup in the text.

Check boxes

When checking revised proofs against the corrected first proof (for Project Managers, Proofreaders, and Production Editors), you may find it useful to tick off corrections as you check that they have been made. Selecting an item in the Comments List brings up an empty check box in the top right hand corner. Click on this to tick the box and again to untick it. Ticked boxes stay marked when you click on a new item in the list.

Changing the identity to whom amendments are attributed

(e.g. to differentiate between corrections made by different people or to keep comments anonymous).

If you wish to change the identity marked in the annotations, it's best to do this before you start marking changes, as changing it in all items in the Comments List after amendments have been made can be time consuming. This can be done as follows:

 Mark up the first amendment as usual. Be sure to make an amendment that creates a box into which text can be entered (i.e. Add sticky note, Insert text, Replace text, Add note to text, etc.)

Printing

In Adobe Reader X it is possible to print out marked up comments at the same time as printing the document. To do this, click the print icon on the top toolbar (or else, in the **File** menu click **Print**),

In the **Comments and Forms** section of the box that appears, select **Document and Markups** and, at the bottom of the page, click on the **Summarize Comments** button. Once all other details are correct click OK to print.

Troubleshooting

If someone has annotated a PDF using the full version of Acrobat, it is easy for them to save the document in such a way that it disables the comment tools for use in Reader. If you receive a PDF where this has happened, an error message will pop up to say that "the document has been changed and the rights to enable special features in Adobe Reader are no longer valid".

In this case, the person who sent you the PDF needs to go back into the file in the full version of Acrobat, click on the **Comments** menu, and then select **Enable for Commenting and Analysis in Adobe Reader**. If they then save the file and resend it to you, you should be able to annotate the PDFs as normal.

1. Introduction

Adobe Reader is the standard tool used for electronic document sharing. It is the only PDF file viewer that can open and interact with all PDF documents. In order to utilize its functional properties Wiley's page proofs are 'Comment Enabled', a feature that allows you to make comments in the PDF documents using Adobe Reader. You can download Adobe Reader at *www.adobe.com*. Please note these screen shots have been taken from a Windows machine. There may be slight differences for a Mac.

2. Procedure

PDF

The PDF will come to you with commenting enabled. If you come across any problems with commenting you can check whether the comment enabling has worked by right clicking the PDF to find 2 options. Option 1: click the Tools option and scroll down to "Comment & Markup" (Figure A) and see if the available options shown below appear; option 2: right click the PDF to find "Add Sticky Note" as the first option. If either of these options works then the PDF is comment enabled.
